Number of episodes : **6**

Duration : **26'**

Production year : **2021**

Summary:

The history of space exploration is made up of unforeseen events, accidents, and nearly calculated risks which, thanks to the ingenuity and preparation of astronauts and specialized technicians, have been resolved without serious consequences and have not made headlines. Although there have been some minor incidents - always impressive in this context, even when they do not cause any bigger issues, it is thanks to the groundwork and training of the astronauts that there have not been fatalities.
